

Loss Landscape — Failed Model (L2=1.3050)
L2=1.3050 | $\lambda_{\max}=93968923.2 \pm 97965534.6$
Init: Normal($\sigma=1.0$) | Epochs: 20000

z-axis: $\log_{10}(\text{loss})$
Downward spike = LOW LOSS = good minimum.
NOT the same as Hessian sharpness.
Hessian $\lambda_{\max}$ measures local curvature
near the minimum, independent of global
landscape shape shown here.
