

Loss Landscape — Success Model (L2=0.0904)

L2=0.0904 | $\lambda_{\max}=3362.4 \pm 810.9$

Init: Xavier | Epochs: 20000

z-axis: $\log_{10}(\text{loss})$

Downward spike = LOW LOSS = good minimum.

NOT the same as Hessian sharpness.

Hessian $\lambda_{\max}$ measures local curvature near the minimum, independent of global landscape shape shown here.
